Professional Summary

Computer Science and Engineering undergraduate (B.Tech, expected 2027) with a strong foundation in C, C++, and Python, networking fundamentals, and network security. Holds multiple Cisco and IBM networking and cybersecurity certifications. Built full-stack, event-driven systems across client, server, and database layers, with a focus on secure authentication, API security, and reliable real-time communication. Led a student team through implementation, testing, and refinement of a browser-based software product. Seeking a Software Engineer role at Cisco with strong interest in wireless networking, test automation, and system validation.

Certifications

Cisco: Introduction to Cybersecurity; Networking Basics; Networking Devices and Initial Configuration; Endpoint Security

IBM: Garage Foundation; Getting Started with Cybersecurity; Cybersecurity Fundamentals; Enterprise Design Thinking Practitioner; Web Development Fundamentals

Other: Claude: AI Capabilities and Limitations; Claude: AI Fluency for Builders; Claude: AI Fluency for Creative Work OPSWAT: Introduction to Critical Infrastructure Protection

Education

Bachelor of Technology (B.Tech), Computer Science & Engineering Expected 2027

Parul Institute of Engineering & Technology (PIET), Parul University – Vadodara, Gujarat

Higher Secondary Education, Amity International School – Bharuch, Gujarat 2023

Secondary Education, Anand Niketan School – Bharuch, Gujarat 2021

Technical Skills

Programming Languages: C, C++, Python, Java, JavaScript (ES6+), HTML5, CSS3

Networking: Networking Fundamentals, Networking Devices and Initial Configuration, SSL/TLS, REST APIs, Client-Server Communication, Real-Time Bidirectional Communication (Socket.io)

Security: Network and Application Security, API Security, Authentication (JWT, bcryptjs), End-to-End Encryption, Rate Limiting, XSS Protection, Endpoint Security, IoT Security

Testing and Debugging: Software Testing, Debugging, Problem Solving, Git, GitHub

Full-Stack Development: Node.js, Express.js, MongoDB, Mongoose, React.js, Vite, Zustand, React Router, Tailwind CSS, Chrome Extension API, Web Speech API

Software Engineering: API Design, Event-Driven Architecture, Real-Time Systems, Modular Architecture, Agile Collaboration

Projects

Secure Real-Time Chat Application 2026 – Present

JavaScript, React, Node.js, Express, MongoDB, Socket.io

- Developing a full-stack real-time communication platform across frontend, backend, and database layers in a unified monorepo.
- Implemented event-driven, bidirectional client-server communication with Socket.io for low-latency message delivery.
- Designed RESTful APIs and MongoDB/Mongoose data services supporting authentication and real-time messaging.
- Secured the application and APIs using JWT, bcryptjs, Helmet, XSS protection, and express-rate-limit to defend against abuse and common web attacks.
- Integrated Cloudinary and Resend services to extend platform functionality.

Adaptive Reading Aid for Dyslexia (Team Lead) 2026

JavaScript ES6, Chrome Extension API, Web Speech API

- Led a student development team to build an accessibility-focused Chrome extension that improves web-page readability.
- Translated user requirements into a working solution using JavaScript, browser APIs, and real-time DOM manipulation.
- Engineered text-to-speech functionality and customizable visual themes while maintaining lightweight, responsive performance.
- Coordinated implementation, problem solving, testing, and refinement across the team using Git.

Personal Website / Portfolio: Live 2026

HTML5, CSS, JavaScript

- Built and deployed a responsive portfolio showcasing projects, skills, and education, with theme switching and client-side interactions.
